

Chip Inductors

(Chip Coils)

muRata *Innovator
in Electronics*
Murata
Manufacturing Co., Ltd.

Introduction

Murata has various chip inductors for every applications such as power circuits and high frequency circuits.

There are 3 types of structure: wirewound, multilayer, film.

These variation enables best selection for every user needs.

We will support customers using material technologies and highly developed design technologies.

Chip Inductors

Explanation of symbols in this catalog

All Products

Features of each series

New product

New product

Design kit available

Reflow soldering applicable

Flow soldering applicable

Inductor for Power Lines (Power Inductor)

Max height xxmm

Shielded with ferrite core

Shielded with magnetic resin

Inductor for Low Frequency Circuits

Shielded with ferrite core

E12 step inductance variation

RF Inductor

E12 step inductance variation

E24 step inductance variation

Hi Q type

Tight inductance tolerance available

for EU RoHS Compliant

- All the products in this catalog comply with EU RoHS.
- EU RoHS is "the European Directive 2002/95/EC on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment".
- For more details, please refer to our website 'Murata's Approach for EU RoHS' (<http://www.murata.com/info/rohs.html>).

Classification and Structure of Chip Inductors

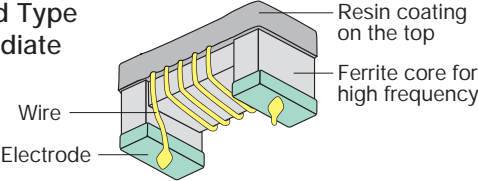

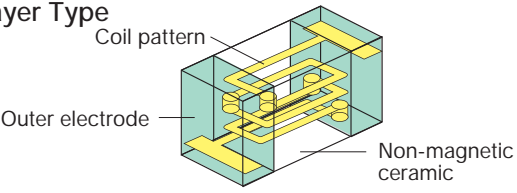

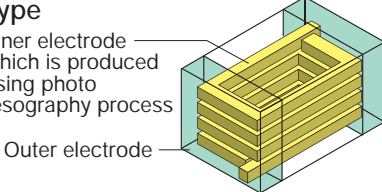

Line Up and Application of Chip Inductors

	Line Up	Application
For Power Lines / For Low Frequency Circuits (Under 100MHz)	Wire Wound Type Ferrite Core  LQH Series (There are some exception.)	For Voltage Conversion For Choke For Resonance Circuits For Low Frequency Filter Circuits
	Multilayer Type Ferrite Core  LQM Series	
RF Inductor (Over Several 10MHz)	Wire Wound Type Ferrite Core for High Frequency  LQW_H Series LQH_H Series	For Impedance Matching For High Frequency Filter Circuits For RF Choke
	Wire Wound Type Non-magnetic Core  LQW_A Series	
	Multilayer Type Non-magnetic material  LQG Series	
	Film Type Non-magnetic material  LQP Series	

Construction and Feature of Chip Inductors

	Construction	Features
For Power Lines / For General Circuits	Wire Wound Type  Ferrite core Wire Some products are coated with magnetic resin. Electrode	Wide inductance range Good DC bias current characteristics
	Multilayer Type  Coil pattern Electrode Ferrite	

△Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
 • This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

		Construction	Features
		RF Inductor	
Wire Wound Type For Intermediate Frequency 	High Q at intermediate frequency		
Multilayer Type 	Industrial standard design		
Film Type 	Small size, but high Q		

● Technical Data

1. Land Area and Q-F Characteristics

A : Net characteristics without land pattern

B:  Characteristic of chip mounted on land

C:  Characteristic of chip mounted on land
 (in mm)

2. Coupling Coefficient Versus Distance between Parts

Murata's LQ series of chip inductors (chip coils) consists of compact, high-performance inductors. Their innovative coil and case structures mean low DC resistance and outstanding high-frequency characteristics. The series is designed for a variety of applications, facilitating component selection for individual circuit requirements.

	Part Number	Structure	Size Code Inch (mm)	Inductance Range									
				1n	10n	100n	1μ	10μ	100μ	1m	10m

Inductance Lineup

- : E-24 or Higher
- : E-12
- : Other

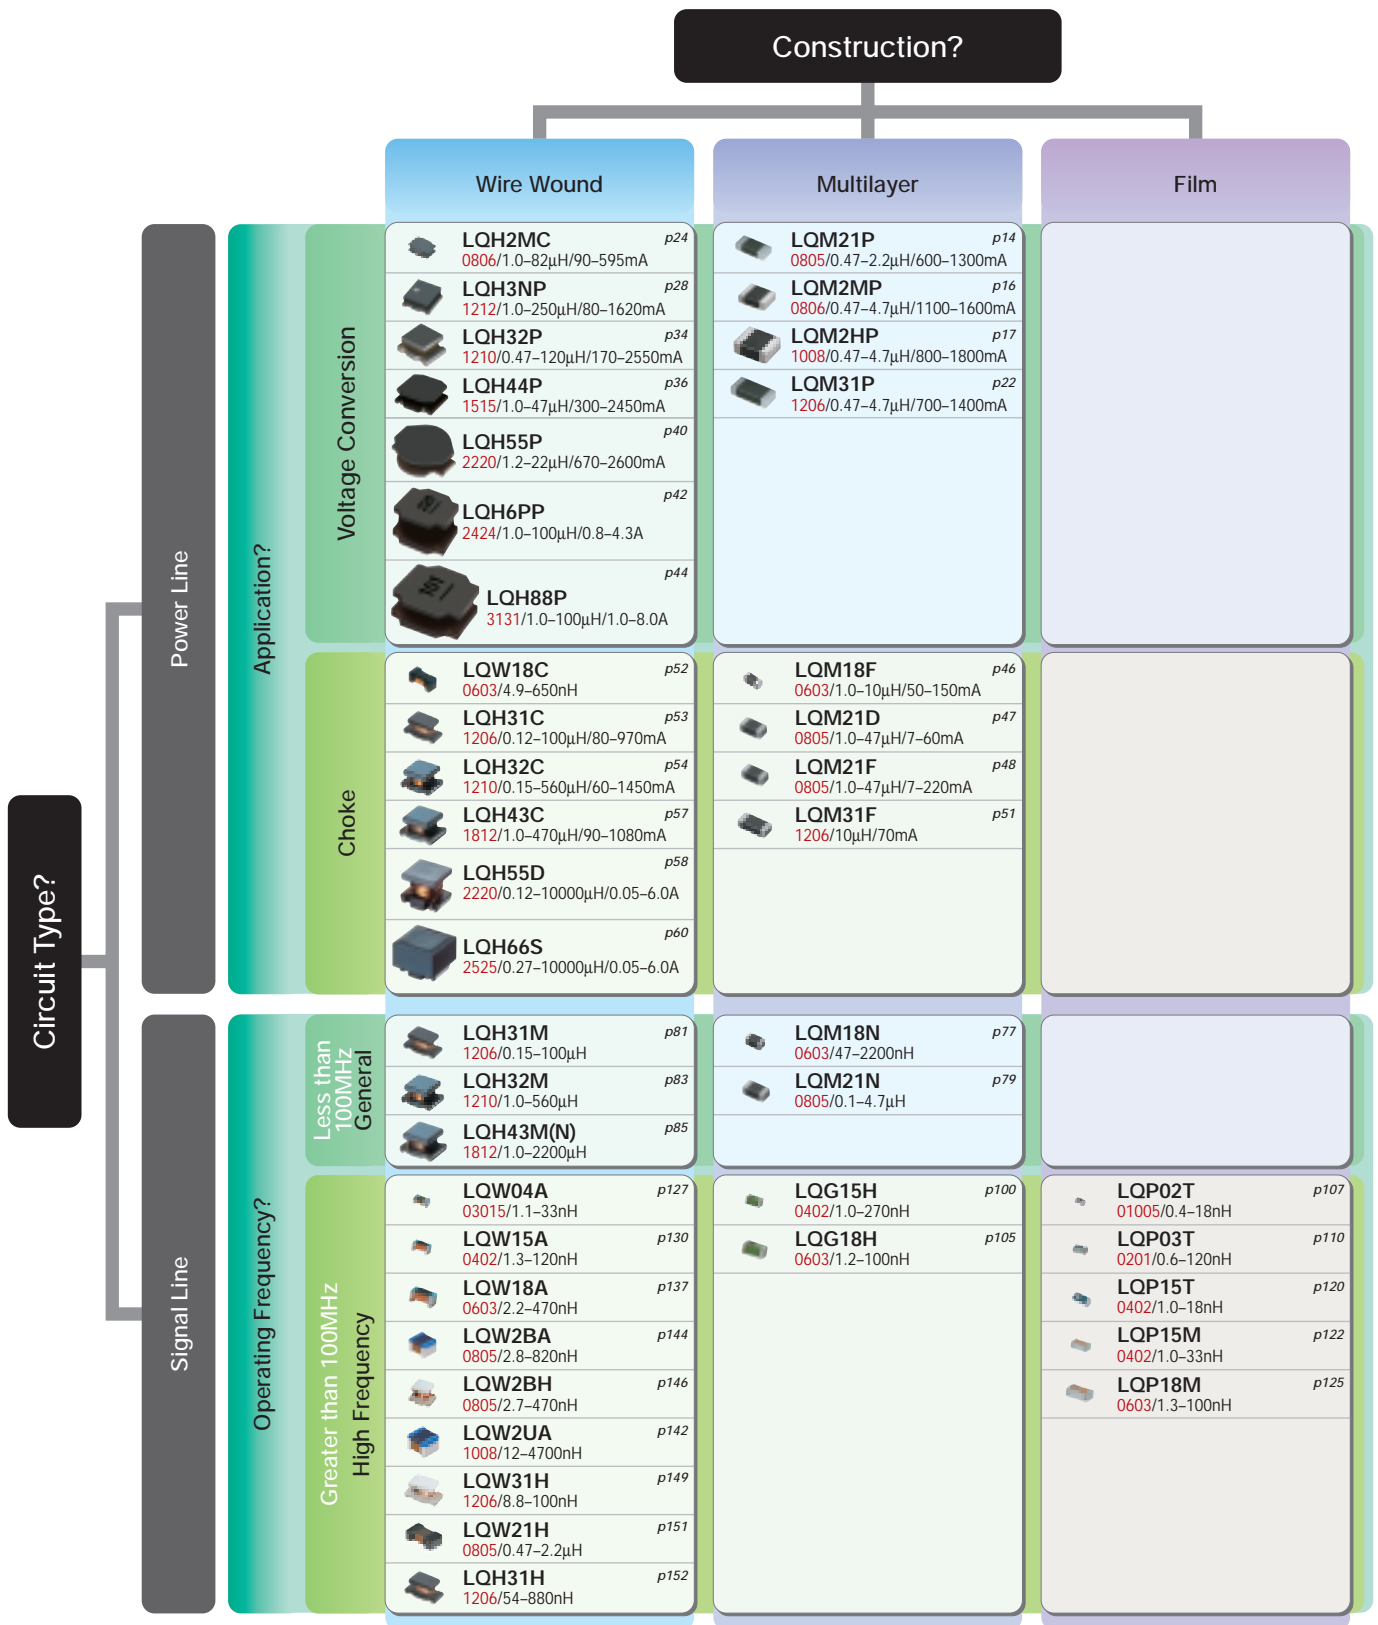

*There are some items which do not match to E step.

CAUTION: Use rosin-based flux, but not strong acidic flux (with chlorine content exceeding 0.2wt%) when soldering chip inductor (chip coil). Do not use water-soluble flux.

Introduction of Power Inductor

Voltage Conversion Efficiency

Effect of losses in power inductor to voltage conversion efficiency
 Important factor of power inductor changes according to working condition of power supply.

●Effect of Magnetic Loss

Magnetic loss affect to efficiency at low output condition.

Tested Sample

●Effect of DC Resistance

DC resistance affect to efficiency at high output condition.

Tested Sample

We design inductors to match the application using latest simulation technology.

Inductor for Power Lines (Power Inductor) Part Numbering

① Product ID

Product ID	
LQ	Chip Inductors (Chip Coils)

② Structure

Code	Structure
H	Wire Wound Type (Ferrite Core)
W	
M	Multilayer Type (Ferrite Core)

③ Dimensions (L×W)

Code	Dimensions (L×W)	EIA
18	1.6×0.8mm	0603
21	2.0×1.25mm	0805
2M	2.0×1.6mm	0806
2H	2.5×2.0mm	1008
31	3.2×1.6mm	1206
32	3.2×2.5mm	1210
43	4.5×3.2mm	1812
44	4.0×4.0mm	1515
55	5.7×5.0mm/5.87×5.2mm	2220
6P	6.0×6.0mm	2424
66	6.3×6.3mm	2525
88	8.0×8.0mm	3131

④ Applications and Characteristics

Code	Series	Applications and Characteristics
D	LQM	for Choke (Low-current DC Power Supplies)
F		for Choke (DC Power Supplies)
D	LQH	for Choke
S		for Choke (Magnetically Shielded Type)
C	LQH/LQW	for Choke (Coating Type)
P	LQM/LQH	for Power Line

⑤ Category

Code	Category
N	Standard Type

⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "R". In this case, all figures are significant digits. If inductance is less than $0.1\mu\text{H}$, the inductance code is expressed by a combination of two figures and the capital letter "N", and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH", and also expresses a decimal point. In this case, all figures are significant digits.

⑦ Inductance Tolerance

Code	Inductance Tolerance
D	$\pm 0.5\text{nH}$
J	$\pm 5\%$
K	$\pm 10\%$
M	$\pm 20\%$
N	$\pm 30\%$

⑧ Features (Except LQH□□P/LQM□□P)

Code	Features	Series
0	Standard Type	LQM/LQH*1 /LQW
2	Standard Type	LQH32C
3	Low DC Resistance	LQH32C
5	Low Profile Type	LQH2MC/32C
7	Large Current Type	LQM21F
8	Low DC Resistance /Large Current Type	

*1 Except LQH32 Series

⑨ Thickness (LQH□□P/LQM□□P Only · Except LQH6PP/LQH88P)

Code	Dimensions (T)
C	0.5mm
E	0.7mm
0	0.85mm
G	0.9mm
J	1.1mm
M	1.4mm
N	1.55mm
P	1.65mm
R	1.85mm
T	2.0mm

⑩ Electrode (Except LQH□□P/LQM□□P)

•Lead (Pb) Free

Code	Electrode	Series
0	Sn	LQM/LQW
2		LQH2MC
3	LF Solder	LQH (Except LQH2MC)

⑪ Specification (LQH□□P/LQM□□P Only · Except LQH6PP/LQH88P)

Code	Specification
0	Standard Type
C	Good Bias Current Characteristics Type

⑫ Thickness (LQH6PP/LQH88P Only)

Code	Dimension (T)
38	3.8mm
43	4.3mm

⚠ Caution

● Rating

Do not use products beyond the rated current as this may create excessive heat.

Notice

● Storage and Operating Condition

<Operating Environment>

Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.

<Storage Requirements>

1. Storage Period

LQM series should be used within 6 months; the other products should be used within 12 months. Check solderability if this period is exceeded.

2. Storage Conditions

(1) Store products in a warehouse in compliance with the following conditions:

Temperature: -10 to +40 degrees C.

Humidity: 15 to 85% (relative humidity)

Do not subject products to rapid changes in temperature and humidity.

Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas.

This will prevent electrode oxidation which causes poor solderability and possible corrosion of inductors.

(2) Do not store products in bulk packaging to prevent collision among inductors which causes core chipping and wire breakage.

(3) Store products on pallets to protect from humidity, dust, etc.

(4) Avoid heat shock, vibration, direct sunlight, etc.

● Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

LQW_C series

- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or other material such as bristles of cleaning brush, to the wire wound portion.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- In some mounting machines, when picking up components, support pin pushes up the components from the bottom of base tape. In this case, please remove the support pin. The support pin may damage the components and break wire.
- In rare case, the laser recognition can not recognize this component. Please contact us when you use laser recognition. (There is no problem with the permeation and reflection type.)

- The product temperature rises about 40°C maximum when the permissible current is applied to LQW18C. Please care heatproof temperatures of the substrate and parts in the surrounding.

LQH_C/D/H/M/N/P series

- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or other material such as bristles of cleaning brush, to the wire wound portion of this product.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- Temperature may rise up to max. 40 °C when applying the rated current to LQH3NP. Be careful of the temperature rating of the circuit board and components around the chip inductor.

LQM series

- There is the possibility that magnetism may change the inductance value. Do not use a magnet or tweezers with magnetism when handling chip inductors. (The tip of the tweezers should be molded with resin or pottery.)
- When the excessive current over rated current is applied, it may cause the inductance value to change due to magnetism.

<Handling>

1. Avoid applying excessive stress to products to prevent damage.
2. Do not touch wire wound with sharp objects such as tweezers to prevent wire breakage.
3. Do not apply excessive force to products mounted on boards to prevent core breakage.

<Transportation>

Do not apply excessive vibration or mechanical shock to products.

<Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values. For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

(LQW, LQH series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of inductor, leading to open circuit.

Continued on the following page. 

⚠ Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., Ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
• This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

<Rated Current>

(LQH2MCN, LQH_P series)

- Based on Inductance Change
When Rated Current is applied to the Products, Inductance will be within ±30% of nominal Inductance value.
- Based on Temperature Rise
When Rated Current is applied to the Products, self-generation of heat will rise to 40°C or less.

● Measuring Method

Measuring Method of Inductance/Q

1. Residual elements and stray elements of test fixture can be described by F-parameter as shown in the following:

2. The impedance of chip inductor (chip coil) Zx and measured value Zm can be described by input/output current/voltage.

$$Z_m = \frac{V_1}{I_1}, \quad Z_x = \frac{V_2}{I_2}$$

3. Thus, the relation between Zx and Zm is shown in the following:

$$Z_x = \alpha \frac{Z_m - \beta}{1 - Z_m \Gamma}$$

where, $\alpha = D / A = 1$
 $\beta = B / D = Z_{sm} - (1 - Y_{om} Z_{sm}) Z_{ss}$
 $\Gamma = C / A = Y_{om}$

Z_{sm} : measured impedance of short chip
 Z_{ss} : residual impedance of short chip*
 Y_{om} : measured admittance when opening the fixture)

*Residual impedance of short chip

Residual Impedance	Series
0.771nH	LQW18C

4. Lx and Qx should be calculated with the following equation.

$$L_x = \frac{\text{Im}(Z_x)}{2\pi f}, \quad Q_x = \frac{\text{Im}(Z_x)}{\text{Re}(Z_x)}$$

Lx: Inductance of chip inductor (chip coil)
 Qx: Q of chip inductor (chip coil)
 f: Measuring frequency

Inductor for Power Lines (Power Inductor)
Soldering and Mounting
Inductor for Low Frequency Circuits
RF Inductor

2. Standard Soldering Conditions

(1) Soldering method

Chip inductor (Chip coils) can be flow or reflow soldered.
Please contact Murata regarding other soldering methods.
As for LQH2MC/55D/66S/32P/3NP/44P/5BP/55P/6PP/88P, LQW18C series, please use reflow soldering.

Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).

Do not use water-soluble flux.

The flux used for LQW18 series should use the rosin-based flux that includes middle activator equivalent to 0.06wt% to 0.1wt% chlorine.

For additional mounting methods, please contact Murata.

(2) Soldering profile

● Flow Soldering profile (Sn-3.0Ag-0.5Cu solder)

Series	Pre-heating		Standard Profile			Limit Profile		
	Temp. (T1)	Time. (t1)	Heating		Cycle of flow	Heating		Cycle of flow
			Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)	
LQM18F LQM21D/21F/21P/2HP/2MP LQM31F/31P LQH31C	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.
LQH32C LQH43C	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	1 times

● Reflow Soldering profile (Sn-3.0Ag-0.5Cu solder)

Series	Standard Profile				Limit Profile			
	Heating		Peak temperature (T2)	Cycle of reflow	Heating		Peak temperature (T4)	Cycle of reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
LQM18F LQM21D/21F/21P/2HP/2MP LQM31F/31P, LQH2MC LQH31C LQH32P/3NP/44P/5BP/55P/6PP/88P LQW18C	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.
LQH32C LQH43C LQH55D, LQH66S	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	1 time

Continued on the following page.

△Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
• This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

(3) Reworking with Soldering Iron
 Preheating at 150°C for 1 minute is required. Do not directly touch the ceramic element with the tip of the soldering iron. The reworking soldering conditions are as follows:

Soldering iron power output: 80W max.
 Temperature of soldering iron tip: 350°C
 Diameter of soldering iron end: 3.0mm max.
 Soldering time: within 3 s

3. Mounting Instructions

(1) Land Pattern Dimensions

Large lands reduce Q of the mounted chip. Also, large protruding land areas (bordered by lines having dimensions 'c' and 'd' shown) cause floating and electrode leaching.

(2) Magnetic Coupling

Since some chip inductors (chip coils) are constructed like an open magnetic circuit, narrow spacing between inductors (coils) may cause magnetic coupling. LQM, LQH66S and LQH_P series have a magnetically shielded structure. The structure makes their coupling coefficient smaller than that of conventional chip inductors (chip coils).

(3) PCB Warping

PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.

Continued on the following page.

Inductor for Power Lines (Power Inductor) Soldering and Mounting Inductor for Low Frequency Circuits RF Inductor

△Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
 • This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

(4) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that solder is applied.

● Guideline of solder paste thickness

- LQM, LQW18C, LQH2MC, LQH44P/5BP/55P/6PP/88P: 100 to 150µm
- LQHs except for ones written above: 200 to 300µm

(5) Amount of Adhesive

If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability. In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering. Apply the adhesive in accordance with the conditions shown in chart.

Part Number	Typical Application Amount (in:mg)
	IR-100
LQM18F	0.06-0.07
LQM21D/21F/21P/2MP	0.20-0.25
LQM31F/31P/2HP	0.25-0.30
LQH31C	0.20-0.25
LQH32C	0.27-0.35
LQH43C	0.60-0.80

4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic
 - Output: 20W/l max.
 - Duration: 5 minutes max.
 - Frequency: 28 to 40kHz
 - Care should be taken not to cause resonance of the PCB and mounted products.

(3) Cleaning agent

The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.

- (a) Alcohol cleaning agents
 - Isopropyl alcohol (IPA)
- (b) Aqueous cleaning agents
 - Pine Alpha ST-100S
 - LQH66S/LQH6PP/LQH88P series: Aqueous agents should not be used because they may cause quality deterioration or damage to appearance.

- (4) Ensure that flux residue is completely removed. Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

Inductor for Low Frequency Circuits Part Numbering

① Product ID

Product ID	
LQ	Chip Inductors (Chip Coils)

② Structure

Code	Structure
H	Wire Wound Type (Ferrite Core)
M	Multilayer Type (Ferrite Core)

③ Dimensions (L×W)

Code	Dimensions (L×W)	EIA
18	1.6×0.8mm	0603
21	2.0×1.25mm	0805
31	3.2×1.6mm	1206
32	3.2×2.5mm	1210
43	4.5×3.2mm	1812

④ Applications and Characteristics

Code	Series	Applications and Characteristics
N	LQM	for Resonant Circuit
N	LQH	for Resonant Circuit
M		for Resonant Circuit (Coating Type)

⑤ Category

Code	Category
N	Standard Type

⑩ Packaging

Code	Packaging	Series
K	Embossed Taping (ø330mm Reel)	LQH/LQM21 ^{*1}
L	Embossed Taping (ø180mm Reel)	LQH/LQM21 ^{*1}
B	Bulk	LQM
J	Paper Taping (ø330mm Reel)	LQM18/LQM21 ^{*2}
D	Paper Taping (ø180mm Reel)	LQM18/LQM21 ^{*2}

*1 LQM21N(2.7 - 4.7μH) only.

*2 LQM21N(0.1 - 2.2μH) only.

⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "R". In this case, all figures are significant digits. If inductance is less than 0.1μH, the inductance code is expressed by a combination of two figures and the capital letter "N", and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH", and also expresses a decimal point. In this case, all figures are significant digits.

⑦ Inductance Tolerance

Code	Inductance Tolerance
J	±5%
K	±10%
M	±20%

⑧ Features

Code	Features	Series
0	Standard Type	LQM ^{*1} /LQH ^{*2}
1	Standard Type	LQM21N
2	Standard Type	LQH32M

*1 Except LQM21N Series

*2 Except LQH32 Series

⑨ Electrode

•Lead (Pb) Free

Code	Electrode	Series
0	Sn	LQM
3	LF Solder	LQH

Inductor for Power Lines (Power Inductor)

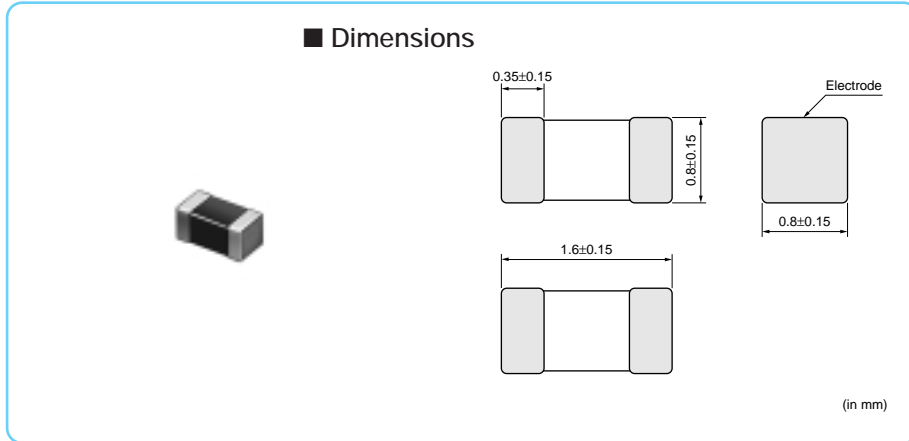

Inductor for Low Frequency Circuits

RF Inductor

LQM18N Series (0603 Size)

0603 Size, Multilayer Type

■ Packaging

Code	Packaging	Minimum Quantity
D	180mm Paper Tape	4000
J	330mm Paper Tape	10000
B	Bulk(Bag)	1000

Refer to pages from p.89 to p.92 for mounting information.

■ Rated Value (□: packaging code)

Part Number	Inductance	Test Frequency	Rated Current	Max. of DC Resistance	Q (min.)	Test Frequency	Self Resonance Frequency (min.)

⚠Caution

● Rating

Do not use products beyond the rated current as this may create excessive heat.

Notice

● Storage and Operating Condition

<Operating Environment>

Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.

<Storage Requirements>

1. Storage Period

LQM series should be used within 6 months; the other products should be used within 12 months. Check solderability if this period is exceeded.

2. Storage Conditions

(1) Store products in a warehouse in compliance with the following conditions:

Temperature: -10 to +40 degrees C.

Humidity: 15 to 85% (relative humidity)

Do not subject products to rapid changes in temperature and humidity.

Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas.

This will prevent electrode oxidation which causes poor solderability and possible corrosion of inductors.

(2) Do not store products in bulk packaging to prevent collision among inductors which causes core chipping and wire breakage.

(3) Store products on pallets to protect from humidity, dust, etc.

(4) Avoid heat shock, vibration, direct sunlight, etc.

● Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

LQH_M/N series

- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or other material such as bristles of cleaning brush, to the wire wound portion of this product.

- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.

LQM series

- There is the possibility that magnetism may change the inductance value. Do not use a magnet or tweezers with magnetism when handling chip inductors. (The tip of the tweezers should be molded with resin or pottery.)

- When the excessive current over rated current is applied, it may cause the inductance value to change due to magnetism.

<Handling>

1. Avoid applying excessive stress to products to prevent damage.

2. Do not touch wire wound with sharp objects such as tweezers to prevent wire breakage.

3. Do not apply excessive force to products mounted on boards to prevent core breakage.

<Transportation>

Do not apply excessive vibration or mechanical shock to products.

<Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values. For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

(LQH series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of inductor, leading to open circuit.

1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the chip inductor (chip coil) electrode.

Series	Standard Land Dimensions

LQH32M																						
LQH43M LQH43N																						

Attention should be paid to potential magnetic coupling effects when using the inductor (coil) as a resonator.

2. Standard Soldering Conditions

(1) Soldering method

Chip inductor (Chip coils) can be flow or reflow soldered.
 Please contact Murata regarding other soldering methods.

Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).

Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering profile

- Flow Soldering profile (Sn-3.0Ag-0.5Cu solder)

Series	Pre-heating		Standard Profile			Limit Profile		
	Temp. (T1)	Time. (t1)	Temp. (T2)	Time. (t2)	Cycle of flow	Temp. (T3)	Time. (t2)	Cycle of flow
LQM18N LQM21N LQH31M	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.
LQH32M LQH43M(N)	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	1 times

- Reflow Soldering profile (Sn-3.0Ag-0.5Cu solder)

Series	Standard Profile				Limit Profile			
	Temp. (T1)	Time. (t1)	Peak temperature (T2)	Cycle of reflow	Temp. (T3)	Time. (t2)	Peak temperature (T4)	Cycle of reflow
LQM18N LQM21N LQH31M	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.
LQH32M LQH43M(N)	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	1 time

(3) Reworking with Soldering Iron

Preheating at 150°C for 1 minute is required. Do not directly touch the ceramic element with the tip of the soldering iron. The reworking soldering conditions are as follows:

Soldering iron power output: 80W max.
 Temperature of soldering iron tip: 350°C
 Diameter of soldering iron end: 3.0mm max.
 Soldering time: within 3 s

Continued on the following page.

△Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
 • This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

3. Mounting Instructions

(1) Land Pattern Dimensions

Large lands reduce Q of the mounted chip. Also, large protruding land areas (bordered by lines having dimensions 'c' and 'd' shown) cause floating and electrode leaching.

(2) Magnetic Coupling

Since some chip inductors (chip coils) are constructed like an open magnetic circuit, narrow spacing between inductors (coils) may cause magnetic coupling. LQM series have a magnetically shielded structure. The structure makes their coupling coefficient smaller than that of conventional chip inductors (chip coils).

(3) PCB Warping

PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.

(4) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that solder is applied.

● Guideline of solder paste thickness

- LQM: 100 to 150µm
- LQHs except for ones written above: 200 to 300µm

Continued on the following page.

△Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
 • This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

(5) Amount of Adhesive

If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability. In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering. Apply the adhesive in accordance with the conditions shown in chart.

Part Number	Typical Application Amount (in:mg)
	IR-100
LQM18N	0.06-0.07
LQM21N	0.20-0.25
LQH31M	0.20-0.25
LQH32M	0.27-0.35
LQH43M(N)	0.60-0.80

4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic
 - Output: 20W/l max.
 - Duration: 5 minutes max.
 - Frequency: 28 to 40kHz
 - Care should be taken not to cause resonance of the PCB and mounted products.
- (3) Cleaning agent
 - The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.
 - (a) Alcohol cleaning agents
 - Isopropyl alcohol (IPA)
 - (b) Aqueous cleaning agents
 - Pine Alpha ST-100S

- (4) Ensure that flux residue is completely removed. Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

Inductor for Power Lines (Power Inductor)

Inductor for Low Frequency Circuits

Introduction of RF Inductor

Application of RF Inductor

LNA

For Matching

High Q or tight inductance tolerance is required to improve signal quality. Especially, film type is suitable at receiver circuit because tight tolerance is required.

- Recommended
- | | |
|---------------------------------|-----------------|
| Film Type | Wire Wound Type |
| LQP03T Series (for miniaturize) | LQW15A Series |
| LQP15M Series | LQW18A Series |
| Multilayer Type | |
| LQG15H Series | |

For RF Choke

Low DC resistance is required because of large operation current. Wire wound type or multilayer type is suitable.

- Recommended
- | |
|-----------------|
| Wire Wound Type |
| LQW15A Series |
| LQW18A Series |
| Multilayer Type |
| LQG15H Series |

IF SAW Filter

For Matching

High Q is required to reduce signal loss. Wire wound type and film type are suitable when tight tolerance is essential.

- Recommended
- | | |
|-----------------|-----------------|
| Wire Wound Type | Multilayer Type |
| LQW15A Series | LQG15H Series |
| LQW18A Series | |
| LQW2BH Series | |
| Film Type | |
| LQP03T Series | |
| LQP15M Series | |

VCO

For Matching

For Oscillator

High Q or tight inductance tolerance is required to stabilize oscillation and signal quality. Wire wound type is suitable for high Q, film type is suitable for tight tolerance.

- Recommended
- | | |
|-------------------------------------|-----------------------------|
| Wire Wound Type | Film Type |
| LQW15A Series | LQP03T Series |
| LQW18A Series | (for miniaturize) |
| LQW18A_10 Series | LQP15M Series |
| (for output efficiency improvement) | (for frequency selectivity) |
| | Multilayer Type |
| | LQG15H Series |

For RF Choke

Low DC resistance is required because of large operation current. Wire wound type or multilayer type is suitable.

- Recommended
- | |
|------------------|
| Wire Wound Type |
| LQW15A Series |
| LQW18A Series |
| LQW18A_10 Series |
| Multilayer Type |
| LQG15H Series |

PA

For Matching

Small shape is required. Film type is suitable because of its tight inductance tolerance and fine inductance step.

- Recommended
- | |
|---|
| Film Type |
| LQP03T Series (for miniaturize) |
| LQP15M Series (for frequency selectivity) |
| Multilayer Type |
| LQG15H Series |

For RF Choke

Low DC resistance is required because of large operation current. Especially, wire wound type is suitable for GSM because over 1A of current is working.

- Recommended
- | | |
|-------------------------------------|-----------------|

RF Inductor Part Numbering

① Product ID

Product ID	
LQ	Chip Inductors (Chip Coils)

② Structure

Code	Structure
G	Multilayer Type (Air-core Inductor (Coil))
H	Wire Wound Type (Ferrite Core)
P	Film Type
W	Wire Wound Type (Air-core Inductor (Coil))
	Wire Wound Type (Ferrite Core)

③ Dimensions (L×W)

Code	Dimensions (L×W)	EIA
02	0.4×0.2mm	01005
03	0.6×0.3mm	0201
04	0.8×0.4mm	03015
15	1.0×0.5mm	0402
18	1.6×0.8mm	0603
21	2.0×1.25mm	0805
2B	2.0×1.5mm	0805
2U	2.5×2.0mm	1008
31	3.2×1.6mm	1206

④ Applications and Characteristics

Code	Series	Applications and Characteristics
H	LQG	Multilayer Air-core Inductor (Coil)
M	LQP	Film Type
T		Film Type (Low DC Resistance Type)
A	LQW	High Q Type (UHF-SHF)
H		High Q Type (VHF-UHF)
H	LQH	for High-frequency Resonant Circuit

⑤ Category

Code	Category
N	Standard Type
S	

⑩ Packaging

Code	Packaging	Series
K	Embossed Taping (ø330mm Reel)	LQH/LQW□□H ^{*2}
L	Embossed Taping (ø180mm Reel)	LQH/LQW2BA/LQW2UA/LQW□□H
B	Bulk	LQW/LQG/LQP
J	Paper Taping (ø330mm Reel)	LQW18A/LQG/LQP ^{*1}
D	Paper Taping (ø180mm Reel)	LQW□□A ^{*3} /LQG/LQP

^{*1} Except LQP02T/15T

^{*2} Except LQW21H

^{*3} Except LQW2BA/LQW2UA

⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "R". In this case, all figures are significant digits. If inductance is less than 0.1μH, the inductance code is expressed by a combination of two figures and the capital letter "N", and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH", and also expresses a decimal point. In this case, all figures are significant digits.

⑦ Inductance Tolerance

Code	Inductance Tolerance
B	±0.1nH
C	±0.2nH
D	±0.5nH
G	±2%
H	±3%
J	±5%
K	±10%
S	±0.3nH
W	±0.05nH

⑧ Features

Code	Features	Series
0	Standard Type	LQG/LQP/LQW/LQH ^{*1}
1	High-Q/ Low DC Resistance	LQW15A/18A/2BH

^{*1} Except LQH32 Series

⑨ Electrode

•Lead (Pb) Free

Code	Electrode	Series
0	Sn	LQG18H/LQP03T/LQW□□A/ LQW□□C
2		LQG15H/LQP02T/LQP03T/LQP15T/ LQP□□M
3	LF Solder	LQW□□H/LQH
4	Au	LQP03T

LQG15HN Series (0402 Size)

0402 Size, Multilayer Type

■ Packaging

Code	Packaging	Minimum Quantity
D	180mm Paper Tape	10000
J	330mm Paper Tape	50000
B	Bulk(Bag)	1000

Refer to pages from p.155 to p.158 for mounting information.

Inductor for Power Lines (Power Inductor)

Inductor for Low Frequency Circuits

RF Inductor
Multilayer Non-Magnetic Type

△Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., Ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
• This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

0603 Size, Multilayer Type

■ Dimensions

■ Packaging

Code	Packaging	Minimum Quantity
D	180mm Paper Tape	4000
J	330mm Paper Tape	10000
B	Bulk(Bag)	1000

Refer to pages from p.155 to p.158 for mounting information.

■ Rated Value (□: packaging code)

Part Number	Inductance	Test Frequency	Rated Current	Max. of DC Resistance	Q (min.)	Test Frequency	Self Resonance Frequency (min.)	
LQG18HN1N2S00□	1.2nH±0.3nH	100MHz	500mA	0.10ohm	12	100MHz	6000MHz	Kit

LQW18A-10 Series (0603 Size)

0603 Size, High Q Wound, Low DC Resistance Type

■ Dimensions

■ Packaging

Code	Packaging	Minimum Quantity
D	180mm Paper Tape	4000
J	330mm Paper Tape	10000
B	Bulk(Bag)	500

Refer to pages from p.155 to p.158 for mounting information.

⚠Caution

● Rating

Do not use products beyond the rated current as this may create excessive heat.

Notice

● Storage and Operating Condition

<Operating Environment>

Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.

<Storage Requirements>

1. Storage Period

LQG series should be used within 6 months; the other products should be used within 12 months. Check solderability if this period is exceeded.

2. Storage Conditions

(1) Store products in a warehouse in compliance with the following conditions:
 Temperature: -10 to +40 degrees C.
 Humidity: 15 to 85% (relative humidity)
 Do not subject products to rapid changes in temperature and humidity.

Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas. This will prevent electrode oxidation which causes poor solderability and possible corrosion of inductors.

(2) Do not store products in bulk packaging to prevent collision among inductors which causes core chipping and wire breakage.
 (3) Store products on pallets to protect from humidity, dust, etc.
 (4) Avoid heat shock, vibration, direct sunlight, etc.

● Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

LQW_A/LQW_H series

- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or other material such as bristles of cleaning brush, to the wire wound portion.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- In some mounting machines, when picking up components, support pin pushes up the components from the bottom of base tape. In this case, please remove the support pin. The support pin may damage the components and break wire.
- In rare case, the laser recognition can not recognize this component. Please contact us when you use laser recognition. (There is no problem with the permeation and reflection type.)

LQH_H series

- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or other material such as bristles of cleaning brush, to the wire wound portion of this product.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.

LQG,LQP series (except LQP02T_02/LQP03T_02)

- The pattern of the chip inductor is covered with protective film. Take care to avoid damaging the chip inductor when handling it with pick-up nozzles, sharp instruments, etc.

<Handling>

1. Avoid applying excessive stress to products to prevent damage.
2. Do not touch wire wound with sharp objects such as tweezers to prevent wire breakage.
3. Do not apply excessive force to products mounted on boards to prevent core breakage.

<Transportation>

Do not apply excessive vibration or mechanical shock to products.

<Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values. For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

(LQW,LQH series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of inductor, leading to open circuit.

(LQP02T_02,LQP03T_02)

When products are coated with resin, please contact us in advance.

Continued on the following page. 

● **Measuring Method**

Measuring Method of Inductance/Q

1. Residual elements and stray elements of test fixture can be described by F-parameter as shown in the following:

2. The impedance of chip inductor (chip coil) Z_x and measured value Z_m can be described by input/output current/voltage.

$$Z_m = \frac{V_1}{I_1}, \quad Z_x = \frac{V_2}{I_2}$$

3. Thus, the relation between Z_x and Z_m is shown in the following:

$$Z_x = \alpha \frac{Z_m - \beta}{1 - Z_m \Gamma} \quad \text{where, } \alpha = D / A = 1$$

$$\beta = B / D = Z_{sm} - (1 - Y_{om} Z_{sm}) Z_{ss}$$

$$\Gamma = C / A = Y_{om}$$

(Z_{sm} : measured impedance of short chip
 Z_{ss} : residual impedance of short chip*
 Y_{om} : measured admittance when opening the fixture)

*Residual impedance of short chip

Residual Impedance	Series
0nH	LQG15HS
0.110nH	LQP02T
0.430nH	LQP03T_00/_04
0.464nH	LQW04A
0.480nH	LQP03T_02
0.556nH	LQG15HN, LQW15A, LQP15T/M
0.771nH	LQG18H, LQP18M, LQW18A, LQW21H

4. L_x and Q_x should be calculated with the following equation.

$$L_x = \frac{\text{Im}(Z_x)}{2\pi f}, \quad Q_x = \frac{\text{Im}(Z_x)}{\text{Re}(Z_x)}$$

L_x : Inductance of chip inductor (chip coil)
 Q_x : Q of chip inductor (chip coil)
 f : Measuring frequency

Inductor for Power Lines (Power Inductor)

Inductor for Low Frequency Circuits

RF Inductor

⚠Caution/Notice

⚠Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
 • This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the chip inductor (chip coil) electrode.

Series	Standard Land Dimensions				
LQG15H LQG18H LQP02T LQP03T LQP15M/15T LQP18M LQW04A LQW15A LQW18A LQW21H LQW2BH LQW2BA LQW2UA LQW31H LQH31H		Part Number	a	b	c
		LQG15H	0.5-0.6	1.4-1.5	0.4
		LQG18H	0.6-0.8	1.8-2.2	0.6-0.8
		LQP02T	0.2-0.23	0.4-0.56	0.16-0.2
		LQP03T	0.2-0.3	0.8-0.9	0.2-0.3
		LQP15M/15T	0.5-0.6	1.4-1.5	0.4
		LQP18M	0.7-0.9	1.8-2.2	0.6-0.8
		LQW04A	0.40	1.0	0.40
		LQW15A	0.65	1.2	0.50
		LQW18A	0.7-1.0	1.8-2.0	0.6-0.8
		LQW21H	1.2	2.6	1.0
		LQW2BH	1.2	3.0	0.8
		LQW2BA	1.78	2.8	0.76
		LQW2UA	2.54	3.3	1.27
		LQH31H	1.5	4.5	1.0
		LQW31H			

Attention should be paid to potential magnetic coupling effects when using the inductor (coil) as a resonator.

2. Standard Soldering Conditions

(1) Soldering method

Chip inductor (Chip coils) can be flow or reflow soldered.

Please contact Murata regarding other soldering methods.

As for LQG, LQP, LQW04A/15A/18A/21H/2BA/2UA series, please use reflow soldering.

Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).

Do not use water-soluble flux.

The flux used for LQW04/15/18/21/2BA/2UA series should use the rosin-based flux that includes middle activator equivalent to 0.06wt% to 0.1wt% chlorine.

For additional mounting methods, please contact Murata.

Continued on the following page.

△Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
 • This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

(2) Soldering profile

- Flow Soldering profile (Sn-3.0Ag-0.5Cu solder)

Series	Pre-heating		Standard Profile			Limit Profile		
	Temp. (T1)	Time. (t1)	Heating		Cycle of flow	Heating		Cycle of flow
			Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)	
LQW2BH/31H LQH31H	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.

- Reflow Soldering profile (Sn-3.0Ag-0.5Cu solder)

Series	Standard Profile				Limit Profile			
	Heating		Peak temperature (T2)	Cycle of reflow	Heating		Peak temperature (T4)	Cycle of reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
LQG15H/18H LQW04A/15A/18A/18C/21H LQW2BA/2UA LQP02T/03T/15M/15T/18M LQW2BH/31H LQH31H	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.

(3) Reworking with Soldering Iron *Except LQP02T Series

Preheating at 150°C for 1 minute is required. Do not directly touch the ceramic element with the tip of the soldering iron. The reworking soldering conditions are as follows:

Soldering iron power output: 80W max.

Temperature of soldering iron tip: 350°C

Diameter of soldering iron end: 3.0mm max.

Soldering time: within 3 s

Inductor for Power Lines (Power Inductor)

Inductor for Low Frequency Circuits

RF Inductor

Soldering and Mounting

3. Mounting Instructions

(1) Land Pattern Dimensions

Large lands reduce Q of the mounted chip. Also, large protruding land areas (bordered by lines having dimensions 'c' and 'd' shown) cause floating and electrode leaching.

(2) PCB Warping

PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.

(3) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that solder is applied.

- Guideline of solder paste thickness
 - LQP (Except LQP02T), LQG, LQW15A/18A/21H/2BA/2UA: 100 to 150 μ m
 - LQP02T: 50 to 80 μ m
 - LQW04A: 80 to 100 μ m
 - LQW_H: 200 to 300 μ m

LQW15A Series:

Too much solder may cause slant or rotation of chip at the time of solder melting. Please reduce the amount of solder by using smaller solder area than land pattern, as shown in figure at right.

a	0.65
b	0.35
c	0.50
d	0.30

Stencil Pattern Land Pattern

Stencil Pattern Land Pattern

△Note • This PDF catalog is downloaded from the website of Murata Manufacturing co., Ltd. Therefore, it's specifications are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering.
 • This PDF catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

(4) Amount of Adhesive

If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability. In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering. Apply the adhesive in accordance with the conditions shown in chart.

LQW_H

Part Number	Typical Application Amount (in:mg)
	IR-100
LQW2BH	0.15-0.20
LQH31H LQW31H	0.20-0.25

4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic
 - Output: 20W/l max.
 - Duration: 5 minutes max.
 - Frequency: 28 to 40kHz
 - Care should be taken not to cause resonance of the PCB and mounted products.
- (3) Cleaning agent
 - The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.
 - (a) Alcohol cleaning agents
 - Isopropyl alcohol (IPA)
 - (b) Aqueous cleaning agents
 - Pine Alpha ST-100S

- (4) Ensure that flux residue is completely removed. Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

Design Support Software SimSurfing

SimSurfing is the latest tool to get the electrical characteristics for Power Inductor on the internet !

You can easily search and download the following data for Power Inductor with no special software.

- ① Part number search
- ② Frequency characteristics (S11, S12, S21, S22, Z, R, X, Y, G, B, L, Q)
- ③ L-DC current characteristics at each temp.
- ④ L-Temperature characteristics at each Bias current
- ⑤ Delta T-DC current characteristics
- ⑥ DCR-Temperature characteristics
- ⑦ S-Parameter download

1 Select the Products

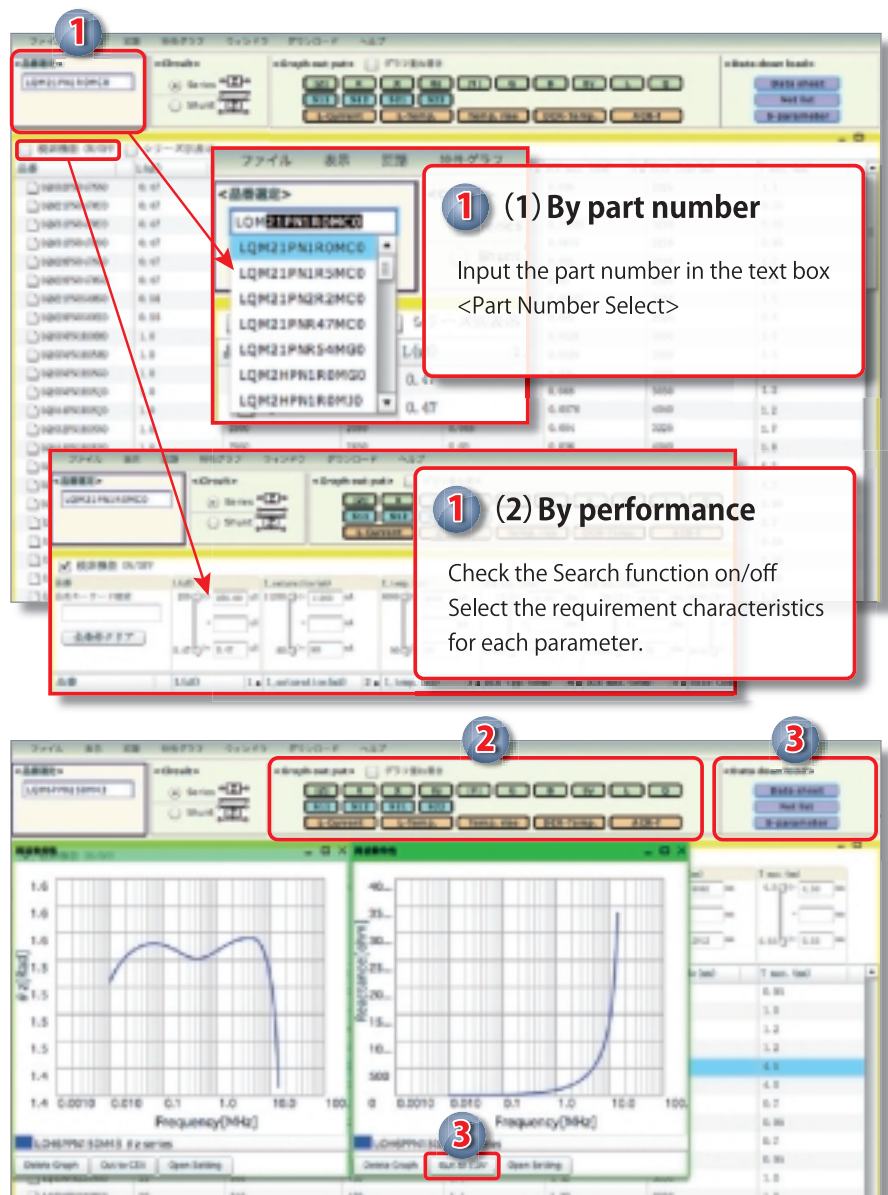

- (1) By part number
- (2) By performance

2 Show graph

Click each button in <Graph out put> area.

3 Data download

Click each button in <data down load> area.

These images are captured at August/2010. Be sure that this software will be updated frequently.

⚠ Note:

1. Export Control

<For customers outside Japan>

No Murata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction [nuclear, chemical or biological weapons or missiles] or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.

<For customers in Japan>

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2. Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

- | | |
|-----------------------------|--|
| ① Aircraft equipment | ② Aerospace equipment |
| ③ Undersea equipment | ④ Power plant equipment |
| ⑤ Medical equipment | ⑥ Transportation equipment (vehicles, trains, ships, etc.) |
| ⑦ Traffic signal equipment | ⑧ Disaster prevention / crime prevention equipment |
| ⑨ Data-processing equipment | ⑩ Application of similar complexity and/or reliability requirements to the applications listed above |

3. Product specifications in this catalog are as of July 2010. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4. Please read rating and ⚠ CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5. This catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7. No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
