4-Channel ESD/EMI Filter Array Plus 4-Channel ESD Array for USB

Product Description

The CSPEMI307A is a multichannel EMI/ESD array offering a combination of four low-pass filter + ESD channels to reduce EMI/RFI emissions on a data port and four dedicated ESD-only channels intended specifically for ESD protection on a USB port. Each EMI/RFI channel integrates a high quality pi-style filter (C-R-C) which provides greater than 30 dB attenuation in the 800–2700 MHz range. These pi-style filters support bidirectional filtering, controlling EMI both to and from a data port connector.

The CSPEMI307A provides a high–level of ESD protection on all eight channels for sensitive electronic components that may be subjected to electrostatic discharge (ESD). The input pins are designed and characterized to safely dissipate ESD strikes of ± 15 kV, exceeding the maximum requirement of the IEC 61000–4–2 international standard. Using the MIL–STD–883 (Method 3015) specification for Human Body Model (HBM) ESD, the device provides protection for contact discharges to greater than ± 30 kV.

The CSPEMI307A is particularly well suited for portable electronics (e.g. cellular telephones, PDAs, notebook computers) because of its small package footprint and low weight. The CSPEMI307A is available in a space-saving, low-profile Chip Scale Package with lead-free finishing.

Table 4. ELECTRICAL OPERATING CHARACTERISTICS (Note 1)

 T_A = 25°C unless otherwise specified.
ESD applied to input and output pins with respect to GND, one at a time.
Clamping voltage is measured at the opposite side of the EMI filter to the ESD pin. For example, if ESD is applied to Pin A2, then clamping voltage is measured at Pin C2.

4. Unused pins are left open.
